## PROFESSIONAL EXPERIENCE

### Senior Software Engineer

*Growthz*

Full Time

Jan 2025 – Present

- Built and operate **Thrive** solo — a CPA-optimization decision engine (~40k lines, sole engineer) in **Python/FastAPI** with async SQLAlchemy, DuckDB/Parquet feature store, and adapter-pattern data sources. 7 independently-testable rule families, cross-lever conflict resolver, and time-based recommendation expiry with a full audit trail per recommendation.
- Added an **ML + LP** optimization layer: per-client **LightGBM** CVR predictor plus a **PuLP** linear program maximizing predicted conversions under net-zero and per-campaign constraints; degrades to deterministic rules when training data is thin. Integrated **Gemini** for analyst-voice narrative summaries per recommendation.
- 2nd-largest contributor on **Wildcard** (~39k lines, 139/790 commits, 9-person repo): integrated **7 ad platforms end-to-end** — Apple Search Ads, Amazon, Reddit, Snapchat, LinkedIn, Meta breakdowns, Bing — including ASA dual-auth (JWT + OAuth) and a **Hawkeye** full-funnel service joining ASA + AppsFlyer + SKAN into idempotent daily aggregates.
- Designed a serverless **video-ad automation pipeline** (TypeScript/NestJS/React on **GCP Cloud Run + Cloudflare R2**) for a client running Meta ads at nine-figure USD annual spend: ~1,000 videos/day (800MB–1.5GB) across 10 Business Managers, 60 ad accounts, with per-BM **Cloud Tasks** queues and header-driven Meta quota backpressure.
- Provisioned infra with **Pulumi** on **AWS ECS Fargate + RDS + S3**; cut AWS costs ~30% via an EC2-based in-house NAT, overnight staging shutdowns, and rightsizing, at 99% uptime.

### AI Full Stack Developer

*Mindcase*

Intern

Aug 2024 – Nov 2024

- Migrated **Supabase** backend to **Microsoft Azure** with **Prisma**; contributed to a **GenAI**-powered document generation feature integrating LLM pipelines into the product workflow.

### Software Developer

*Avanti Fellows*

Intern

Oct 2023 – Mar 2024

- Built a quiz creator and college predictor in **Next.js** and **Tailwind CSS**; created secure CRUD API endpoints with pagination.

### Google Summer of Code

*JdeRobot*

Participant

May 2023 – Aug 2023

- Built a cross-platform **Electron.js** desktop app; containerised backend in **Docker** for Windows and Linux. [Blog](#).

## PROJECTS

### growthz.ai | Marketing Automation Platform

*Tech Stack: Python, LLMs, Next.js, AWS*

Live

Jan 2025 – Present

- End-to-end flow: URL scraping → AI creative generation → campaign management → analytics across **Meta, Reddit, LinkedIn, ASA, Google Ads, DV360, AppsFlyer**.
- LLM pipeline extracts brand tone and copy to produce on-brand ad creatives, deployed on **AWS**.

### rightcontent.ai | Multi-Channel AI Content Platform

*Tech Stack: Python, LLMs, Next.js, AWS*

Live

Jan 2025 – Present

- Sole engineer: product vision, UI/UX, frontend, backend, AI pipelines, and cloud deployment.
- URL + keywords in; platform-native content for 6 channels (Reddit, Instagram, Amazon A+, LinkedIn, Twitter, blogs) out, with one-click publish.

## TECHNICAL SKILLS

**Languages:** Python, TypeScript, JavaScript, Java, SQL, HTML/CSS

**Backend & Frontend:** FastAPI, NestJS, Node.js, Express, SQLAlchemy, Prisma, Next.js, React, React Native, Tailwind CSS, Redux, GraphQL, Electron.js

**Data & AI/ML:** Postgres, DuckDB, Parquet, pandas, LLMs, Prompt Engineering, GenAI Pipelines, LightGBM, PuLP/OR-Tools

**Cloud & Infra:** AWS (ECS Fargate, RDS, S3, SQS, Lambda, EC2), GCP (Cloud Run, Cloud Tasks, Cloud SQL), Cloudflare R2, Docker, Pulumi, GitHub Actions, TurboRepo

## EDUCATION

### SRM Institute of Science and Technology

*Bachelor of Technology in Computer Science and Engineering*

8.5 CGPA

Sept 2020 – Jun 2024

## ACHIEVEMENTS & CERTIFICATIONS

**Hackathon Winner:** Smart India Hackathon (Sept 2023, AICTE) and Solving for India Hackathon (April 2023, Google Cloud x AMD x GFG). Cohort member, **Code 4 GovTech** (2023); **Google Summer of Code** 2023 with JdeRobot.
